

Appl No. 10/083,180

Amdt. dated May 5, 2005

Reply to Office Action of March 5, 2004

Amendments to the Claims:

This listing of claims will replace all prior listings.

Claim 1 (original): A medication dispenser, comprising:  
a pill compartment having an open end;  
a tractor drive;  
means for rotating said tractor drive;  
a retainer belt that forms a loop around said tractor drive  
and said open end, said belt having a discharge port of  
substantially the same dimensions as said open end, a rotation of  
said tractor drive causing a rotation of said belt;  
a programmable control unit;  
10 a door compartment proximal to said open end; and  
means for stopping said rotation in response to said  
discharge port being in a discharge alignment with said open end,  
the alignment providing a passageway from said open end through  
said discharge port to said door compartment where medication is  
15 dispensed, said control unit causing said rotation at a  
preprogrammed time after a door of said door compartment is  
opened.

Claim 10 (original). The medication dispenser of claim 1 wherein said pill compartment has a floor that is angled downward from a vertical line.

B  
Claim 11 (original): The medication dispenser of claim 2 wherein said door compartment has a floor that is angled downward from a vertical line.

Claim 12 (original): The medication dispenser of claim 1 wherein said means for stopping comprises:

a reflective positioning mark embedded within said belt; and  
an optical sensor that transmits light, said positioning  
5 mark being positioned to receive the transmitted light and  
reflect it back to said sensor when the discharge alignment  
occurs, said sensor providing a stop signal to said control unit  
in response to the reflected light that causes said rotation to  
stop.

b<sup>1</sup> Claim 13(original): The medication dispenser of claim 1 additionally comprises a switch connected to said door, said switch providing a start signal in response to said door being opened.

Claim 14 (original): The medication dispenser of claim 1 wherein said means for rotating comprises;

a motor; and

5 means for coupling said motor to said tractor drive to cause rotation of said tractor drive in response to only one direction of rotation of said motor's shaft

Appl No. 10/083,180

Amdt. dated May 5, 2005

Reply to Office Action of March 5, 2004

Claim 15(original): The medication dispenser of claim 6 wherein said means for coupling comprises:

a motor worm connected to said motor's shaft;

5 *B* a worm gear that is coupled to said motor worm, said worm gear rotating in response to rotation of said motor; and

a ratchet pawl connected to said worm gear and said tractor drive, said ratchet pawl engaging said tractor drive when said motor's shaft rotates in said one direction.

Claim 16. The dispenser of claim 1 additionally comprising means for programming said control unit.

Claim 17(currently amended). The dispenser of claim 16 ~~claim 1~~ wherein said programming means comprises:

a keypad connected to said control unit: and

a display connected to said control unit.

Appl No. 10/083,180

Amdt. dated May 5, 2005

Reply to Office Action of March 5, 2004

Claim 18 (previously presented). The dispenser of claim 16 wherein said programming means comprises:

(3) a communication link adapted for connection to a standard telephone line, said communication link being connected to said control unit; and

a display connected to said control unit.

Claim 19 (original): The dispenser of claim 1 comprising:

a housing wherein said control unit is mounted; and

a rechargeable power supply mounted in a cartridge that is adapted for installation within said housing; and

5 means for connecting said power supply to said control unit when said cartridge is installed.

Claim 20 (original): The dispenser of claim 19 wherein said pill compartment and said tractor drive are additionally mounted within said cartridge.
